

Children with **Effective** Sensory Processing

- Are responsive to home routines
- Manage successfully within the community
- Can sit and attend for age appropriate lengths of time during school tasks without being distracted
- Transition between activities without incident

Children with **Ineffective** Sensory Processing

- May shutdown when things become overwhelming
- Sensory needs affect their daily routine/function
- May fit into one of four Sensory Processing Patterns
- May display a mixed response to different sensory input

Behaviors You May See “My Child....”

- Is very, very irritable
- Is inattentive and becomes easily distracted
- Has difficulty sitting still
- Can't keep his hands to himself
- Constantly chews on clothes or other objects
- Appears hypersensitive... covers his ears...squints his eyes... avoids touching certain textures...dislikes being touched (defensiveness)
- Is often labeled lazy or unmotivated
- Is clumsy, floppy and has difficulty planning movements

Cognition: Level 4
requires a solid foundation of lower levels;
develop self control/regulation,
learn and grow academically
learn to feed, dress and bathe self

Perceptual Motor: Level 3
develops visual and auditory attention,
language skills,
eye-hand coordination

Sensory Motor: Level 2
develops ability to imitate,
gain security in movement,
filter irrelevant input,
aware of body

Sensory Processing: Level 1
smell, touch, taste, vision/visual perception,
hearing/auditory, movement/balance,
kinesthesia/muscle tone

Advance My Baby — is the first manual to address these issues with color photos, graphics and activities and exercises for your baby.

Babies are not born with how-to manuals. If they were, it would be *Advance My Baby*

Advance My Baby is a self-help manual for parents that will empower them with knowledge and skill to raise beautiful healthy babies. Advance My Baby manual teaches what developmental milestones to watch for each month.

Learn to recognize signs of normal progress, and signs that your baby needs a little more reinforcement. Advance My Baby helps you avoid the regret of unnecessary delays in taking remedial action that can make a lifetime of difference for your baby.

Advance My Baby is a low cost method in comparison to the lifetime of savings you will gain.

Easy-to-read chapters address all developmental categories: gross and fine motor skills, cognition, language, emotional growth, social interactions, and self-care skills. Advance My Baby prepares parents with activities and exercises to enjoy with their babies that draw on these developmental skills for optimal overall growth and development.

Visit the website to learn more of the manual, AMB On-Line Assessment and other products that lead you to success with your child.

Autism Spectrum
Disorder
Core Deficits

Autism Spectrum Disorder Core Deficit Characteristics

Severe Sensory Processing Disorder

- Poor regulation
- Poor modulation
- Poor discrimination
- Poor visual attention
- Poor auditory processing
- Poor mirror neuron efficiency
- Poor balance and coordination
- Poor strength and endurance for age
- Poor gross/fine motor skills
- Delays in self-care skills
- Picky eaters
- Explosive behavior
- ADD/ADHD

Emotional Delays

- Poor referencing
- Poor eye contact
- Unable to read and interpret non-verbal communication
- Controlling and dominating behaviors
- Poor experience and emotion sharing
- Poor problem solving skills
- Feel uncomfortable in dynamic situations

Speech Delays

- Auditory Processing Disorder
- Poor nonverbal communication skills
- Apraxia

Difficulty functioning in dynamic interactions with others and prefer static/safe/consistent environments

- Have poor co-regulating or monitoring skills
- They have difficulty adapting to or altering plans based on changing circumstances

Poor Resilience

- Become easily frustrated
- Have overwhelming feelings of incompetence – avoidance syndrome
- Tend to run away when they feel incompetent.
- Poor task completion

Rigid Inflexible Thinking

- Can't see "shades of gray."
- OCD
- Need for strict daily routes with no variations
- Prefer to play with static toys

Poor Play Skills

- They tend to focus on the peripheral/outer edges of rooms i.e. ceiling fans, lights, windows, light switches, pictures, plants, etc...

Episodic memory and appraisal deficiencies

- Unable to reflect on past experiences or personal memories for anticipation of future ones.
- Unable to analyze and develop a "game plan" for a situation.

Biological Issues

- Food sensitivities – most common gluten (wheat protein) and casein (dairy protein) and need to be put on a strict GFCF diet.
- Decreased levels of glutathione
- Decreased levels of essential fatty acids
- Leaky gut syndrome
- High levels of metals in blood and tissues
